BioTek’s Epoch™ Multi-Volume Spectrophotometer System is designed for a wide range of applications, from nucleic acid and protein quantification on a micro scale to cell-based assays in microplates, BioCells or standard cuvettes.

The Epoch Microplate Reader bridges the gap between high performance, monochromator-based absorbance readers and the lower cost, lower performing filter-based absorbance readers by providing excellent UV/Vis measurements in a compact, efficient and robust design. Add the Take3™ Multi-Volume Plate to the equation and the result is multi-volume system, capable of performing all the assays common to the biomolecular research laboratory.

Epoch’s high quality optical system incorporates a precision monochromator for wavelength selection without using interference filters. Microplate assays in 6- to 384-well plates are quickly and efficiently run via Gen5™ Software. When sample volumes are critical, the Take3 Multi-Volume Plate allows up to sixteen 2 μL samples to be measured quickly and easily.

For the budget conscious laboratory focused on important nucleic acid and protein quantification as well as standard ELISA and other colorimetric assays, the Epoch Multi-Volume Spectrophotometer System offers unsurpassed versatility.
